

evo² Dual 4G Router

The Evo2 Dual 4G Router by MarPoint is the latest innovation for high speed internet at sea with extensive coverage up to 20 miles offshore. A reliable and fast 4G solution with a set of fair use policies and traffic prioritizations.

Ideally recommended for commercial vessels especially on remote locations where high speed internet is required. Extremely suitable when travelling routes are near to coastlines. Furthermore, it can be used as a reliable data communication backup solution when satellite communication is not available.

Evo2 4G Router has two external SIM slots, thus offering the ability to insert two SIM cards from different or same providers. Also dual SIM slots allow you to control other WAN interfaces (i.e VSAT, FBB etc) and get double bandwidth , extended connectivity and increased coverage.
